The information contained in this presentation is subject to amendment, revision and updating. Certain statements contained in this presentation may be statement of future expectations and other forward-looking statements that are based on the management's current views and assumptions and involve known and unknown risks and uncertainties.

Actual results, performance or events may differ materially from those in the statements as a result of, among others, factors, changing business or other market conditions and the prospects for growth anticipated by the management of the Company. These and other factors could adversely affect the outcome and financial effect of the plans and events described herein.

The Company does not undertake any obligation to update or revise any forward-looking statements which speak only as of the date of this presentation.

This presentation is for information purposes only and must not be further distributed or passed on to any party which is not the addressee of this presentation. No part of this presentation must be copied, reproduced or cited by the addressees hereof other than for the purpose for which it has been provided to the addressee.

PRODUCTS FOR EVERY APPLICATION

POWER TRANSFORMERS AND ENERGY SOLUTIONS FOR GENERATION & TRANSMISSION

Taylor-made projects based on customer specifications and operational environment of every plant to maximize efficiency and return on investment

+600

Completed projects for installations in 35 countries as of 2019

HV & MV GENERATION PLANTS

MV & LV DISTRIBUTION

SOLAR FARMS

WIND PARKS

HYDROELECTRIC APPLICATION

BIOGAS

RELATED PRODUCTS

- HV fluid insulated power transformers
- MV fluid insulated and cast resin distribution transformers
- Complete MV substations, including MV and LV panels and fittings
- Energy solutions and transformers customized for inverter load
- Integrations with energy storage systems

ENERGY SOLUTIONS FOR A SUSTAINABLE FUTURE

60

Installations for renewable energy applications as of (2019)

Turnkey high efficiency solutions to allow the fast commissioning of every plant

350

Charging spots powered by customized recharge systems as of 2019

High-speed recharge solutions also suitable for city centres, allowing a significant cost reduction for security and maintenance.

WESTRAFO

ENERGY STORAGE

E-MOBILITY

SMART GRID

INTEGRATED SOLUTIONS

RELATED PRODUCTS

- Battery Energy Storage container solutions
- Recharge station systems with complete substations
- Transformer monitoring systems
- Integrated engineering solutions

50

Years of experience
in the business

KNOW HOW

- Taylor made production
- Maximum operational flexibility with 2 hours average time of working station set-up

TEAM

Nothing of what we do would be possible without our strong and dynamic team, always up-to-date with our projects, giving energy to our values everyday.

OUR QUALITY CERTIFICATIONS

In order to compete in the current market, Westrafo has implemented a complete management system both from the point of view of quality and the environment and has also obtained various certifications for its products.

Company quality certifications:

- **ISO 9001: 2015 certification**
- **ISO 14001: 2015 certification**

Product quality certifications:

- Product type certifications issued following type and special tests performed under customer supervision
- Certificates of short circuit tests performed at CESI on various transformers
- Certificates of special and type tests performed under the supervision of CESI
- UL certification for our series of transformers for the photovoltaic market valid for the American market
- Collaboration with various universities for type tests on transformers and cabinets

UNIVERSITÀ
DEGLI STUDI
DI PADOVA

BATTERY STORAGE CONTAINER

Our Energy Solutions division designs and manufactures Battery Storage Container; the main areas of study and production concern:

- 10/20/40/45 ft containers or E-House
- AC panels
- DC panels
- HVAC system
- F&G system (detection and suppression)
- Communication systems
- Commissioning and Service

MEDIUM VOLTAGE STATION

Specialized in the realization of MVS.

Main technical details:

- 10ft/20ft/40ft container structure or concrete solutions
- 3 compartments (Low Voltage, Transformer, Medium Voltage)
- Auxiliary, fan, security systems
- LV Distribution Board of our design and production (with main switch and fuses switch-disconnector IP20)
- MV cabinet of Main brands
- Communication systems
- Commissioning and Service

CASE HISTORY - SOLAR ENERGY STORAGE ENERGY SYSTEM FOR 'THE BRANDO'

This project is particularly important for us in Westrafo, as it testifies our ability to provide vertical solutions and to expand our consultancy, design and project management to applications going beyond the supply of power and distribution transformers.

The supply of this battery container solution on Brando Island was rendered particularly tricky because of the remote location.

The container was designed taking particular care about the weight and dimensional restrictions, as it needed to be transported via ship to Papeete and then, on a smaller ship with weight limitations, to The Brando, a private Island hosting an exclusive resort.

The final installation and commissioning was completed by Westrafo Technicians on site.

Project Description:
1 battery storage container 40ft
Power 3 MW

Application:
Energy storage

Destination:
Assembly and finishing: Papeete
Final destination:
Brando Island, French Polynesia

Year:
2018

CASE HISTORY - SOLAR ENERGY STORAGE ENERGY SYSTEM FOR SCHWARZE PUMPE

The BigBattery will be built next to the Schwarze Pumpe power plant. 13 containers have been planned on an area of 110 by 62 metres to accommodate the lithium-ion batteries. The battery storage system will be connected to the grid at the high-voltage level (110 kilovolts). The connection to the extra-high voltage grid is also provided here.

BigBattery Lausitz combines modern power plant infrastructures with storage technology in a completely new order of magnitude. In this constellation the project is the only one of its kind in Europe, to date.

Project Description:
13 battery storage container 45ft
HVAC system 4 MW

Application:
Energy storage

Destination:
Assembly and finishing: Germany

Year:
2019

CASE HISTORY - SOLAR ENERGY STORAGE ENERGY SYSTEM FOR MAYREAU ISLAND

In mid-2018, St. Vincent and the Grenadines will be connecting its first microgrid to its power system.

The EPC contract was signed in late December 2018 between St. Vincent and the Grenadines utility, and Curacao solar energy firm, for the utility's first solar battery storage microgrid.

The system, to be built on the island of Mayreau in the Grenadines, will produce enough energy to power the island for 6 to 10 hours per day.

The microgrid will be designed to withstand the strongest Category V hurricanes, and will be instrumental in meeting national goals of greenhouse gas reduction and increase in renewable energy.

This project contract signing signifies progress, and demonstrates VINLEC's and the Government of Saint Vincent and the Grenadines' continued commitment to changing the current electricity generation mix.

Project Description:
2 battery storage containers
20ft ISO

Application:
Energy storage

Destination:
Mayreau Island
of St. Vincent and the Grenadines

Year:
2019

CASE HISTORY - MVS INTEGRATION ENERGY SYSTEM FOR PROJ. KRANICH

Project Description:

1 MVS-STP unit including a
660 kVA 20/0,4 kV transformer

Application:

Solar energy substation optimized for inverter load

Destination:

Germany

Year:

2019

MVS-STP is the first MT turnkey solution in the world, in a 10-foot container specific for string inverters.

The realization of photovoltaic power plants with decentralized configuration is in this way considerably simplified: in addition to the greater rapidity of transport, the medium voltage station allows to save costs also thanks to the reduced installation and commissioning times.

So far, for decentralized photovoltaic power plant manufacturers, the only possibility was to make the connection necessary for connection to medium voltage networks directly on site with the individual components of the supply.

All the components for connection to the medium voltage network are already completely pre-installed inside MVS-STP, making the installation immediate upon arrival at the site.

CASE HISTORY - E-MOBILITY

SPL TRANSFORMER FOR RECHARGE STATION AFFI SUPERCHARGER

This project for the supply of transformers designed for electric cars battery chargers is proving Westrafo to be a transformer Company capable of designing a solution exactly for the type of application requested by the end customer.

In particular, our Sustainable Peak Load transformers are able to sustain effortlessly the high energy peaks needed to recharge completely an electric car in less than 30 minutes, without damaging the transformer (and, naturally, the Superchargers) in the long run.

The new Superchargers are now being installed all across Europe with the contribution of Westrafo's transformers.

These devices will exploit the new 350 kW DC technology to ensure very high-speed refills with just slightly longer stop times compared to what is used today at a normal fuel distributor.

Westrafo's SPL application fits perfectly to the purpose, guaranteeing great performance and reliability in every Supercharger station across Europe.

Project Total Power:
16 superchargers available 24/7
fed by a sustainable peak
load transformer insulated
with FR3 natural ester

Transformers supplied:
1 Unit Power
1550 /1400-150 kVA
Voltage 20/0,48-0,40 kV

Destination:
Verona - Italy

Year:
2018
